## INTUITIVE INTERFACES

## GRAYHILL DESIGNS AND MANUFACTURES INTUITIVE INTERFACES THAT MAKE MACHINES FEEL LIKE AN EXTENSION OF YOU.

Our integrated interfaces create a whole solution, custom-designed by our exacting engineers with finely tuned haptics specific to your needs that are experienced as a click above the rest.

Advanced components include optical encoders, rotary switches, keypads, joysticks, pushbuttons.

We move people forward with engineered ease and unfailing precision.

With Grayhill, everything clicks.

## Certificates

$\rightarrow$ AS9100D Certificates:
La Grange, McCook, Carpentersville
$\rightarrow$ ISO9001: 2015 Certificates:
All Facilities
$\rightarrow$ ISO14001: 2015 Certificates:
McCook, Shenzhen

## THE GRAYHILL DIFFERENCE

## 1

## ENGINEERING EXPERTISE

Our engineers understand haptics, ergonomics, styling, and the evolving needs of end users. We customize to get to the fine-tuned nuances that make a meaningful difference.

2

## QUALITY IN OUR PROCESS

We integrate our own components into our intuitive interfaces, and we test and retest every step of the way to lower cost and risk.

3

## VERTICAL INTEGRATION

By utilizing in-house molding, tooling, testing, and manufacturing capabilities, we bring custom products to market faster.

## PROCESS CONTROL AND PRODUCTION CONSISTENCY

## SECOND GENERATION

## 3J CONTROLLERS

Grayhill's Generation 2 MMI Controllers are well suited for ISO 13849 Safety Rated Vehicles. They feature self-diagnostic functions, supply voltage monitoring, indicator "LED On" verification, and button malfunction detection.

These MMI Controllers require just a simple front mount and snap-in installation.

## SECOND GENERATION

3K KEYPADS

Grayhill's Generation 2 CANbus keypads offer a low-profile snap-in mounting scheme, wide viewing angle LED indicators, built-in diagnostics capabilities, and 2 I/O pins (except for 6 button variants).

The legends on this keypad will exceed the stringent Off-Highway requirements for Abrasion, UV, and Chemical Resistance.

Available in various form factors ( $6,8,12$, and 15 button) supporting both the J1939 and CANopen protocols. These IP 67 sealed keypads can have customized artwork and LED backlight/ indicator colors).

## 3D70 CANBUS DISPLAY

The 7-inch versatile display utilizes a scratch resistant, anti-glare window that optically bonds to the LCD to ensure visibility under strong sunlight.

The flush-mounted displays can blend with any vehicle cab seamlessly and provide a modern look and feel to your design.

The display supports Qt by default and offers an additional CODESYS application development option.

## TOUCH ENCODER

Our newest Touch Encoder combines the functionality of conventional touch displays, keypads, and rotary switches that can support multiple languages and end-product configurations.

The Grayhill Software team developed an intuitive app allowing the user to easily create projects.

## SOLUTIONS

## OFF-HIGHWAY VEHICLES

## Grayhill understands the human

 interface requirements of farmers and construction workers. Because operators of off-highway vehicles spend long days in the driver's seat, engineers at Grayhill look beyond basic functionality to improve operator efficiency and comfort.We specialize in creating user interface devices that communicate via CANbus ( $J 1939$ and CANopen protocol) to control on-board systems. A standard range of keypads, joystick/encoders and displays are offered as base products ready for quick, cost-effective customization.

These products simplify mechanical installation into the vehicle cab and electrical integration with the vehicle's control units. Grayhill can also deliver intuitive user interfaces for your vehicle application.

CUSTOM ARMREST

## SOLUTIONS

## MILITARY

Grayhill delivers custom human interface solutions that meet the needs of our military personnel in the field.

Grayhill can customize our extensive offering of rotary switches and encoders by changing form factor, electrical termination or adding shaft/panel seals to providing custom populated flex sub-assemblies that our customers can install in their final assemblies.

Grayhill also provides custom military HMI solutions that can contain Keypads, Wide Temperature Displays, Electronics with custom firmware that can contain MIL-STD-3009 compliant NVIS lighting. Having been a military component supplier for more than 75 years, Grayhill has the expertise to deliver products that reliably meet the rugged military environmental requirements while providing the high quality haptics expected by soldiers when using our products. Grayhill is AS9100 Rev D and ITAR Compliant.

## SOLUTIONS

HEALTHCARE

Grayhill always focuses on creating a reliable user interface solution for the end user, no matter the application.

In the case of medical professionals, our products aim to provide excellent tactile and audible feedback during critical situations.

We design with minimal crevices and durable materials to meet cleaning and disinfection requirements commonly seen in healthcare applications.

A

C

## TOUCH ENCODER

## Key Features

Replaces many traditional user input devices (such as switches, keypads, pushbuttons, displays, etc.) with a simple and intuitive device.

## Supported Gestures

- Tap + Swipe + Turn

High Resolution Display

- 245 PPI ( $320 \times 300$ )

Quick User Interface Development

- Intuitive development platform
- Library of configurable standard widgets

## Incorporates Pictures

- PNG, JPEG, etc.

## Robust

- Sealed to IP67, high impact strength, chemical resistant
- Optimal front panel footprint
- Stores hundreds of screens (32MB memory)
- Field upgradable application and firmware
- 1,000,000 encoder cycles
- USB 2.0 or CAN J1939 communications with host device

## Touchscreen/Display

- Optically bonded display and touchscreen for excellent sunlight readability
- Touchscreen construction:

High Resolution PCAP ITO

## Touch Encoder App

Create countless widget configurations by using the Touch Encoder app.

## GRAYHILL IS THE LEADING MANUFACTURER OF SINGLE AND MULTI-DECK ROTARY SWITCHES WITH EXTREMELY RUGGED CONSTRUCTION AND VIRTUALLY LIMITLESS CONFIGURATIONS.

Many of our rotary switches are MIL qualified to exacting electrical, mechanical and environmental standards. We offer many options including isolated positions, spring returns, adjustable stops, concentric shaft switches and configurable keylock switches.
$\rightarrow$ Contact a Grayhill representative early in your design process to discuss your application. In many cases, we can meet your requirements with a standard option or a simple modification.

PRODUCT SELECTION CHART: SINGLE DECK

| Series | Features | Life Cycles | Poles | Angles of Throw ( ${ }^{\circ}$ ) | Rating (Max) | Switch Diameter inches [mm] | Behind Panel Depth inches [mm] | Termination Options |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Typical applications include:

- Two-way radio frequency selection
- Industrial controls, test and measurement tools
- Security systems with keylock controls
- Military radios, transmitters and receivers
- Ground and airborne vehicle controls

## Customizations can include:

- Fixed stop, adjustable stop or continuous rotation
- Multiple termination and cabling options
- Custom detents (clicks) and tactile feel
- Special operations such as pull-to-turn
- Modified shaft lengths and flats

KEYLOCKS

## GRAYHILL SPECIALIZES IN OPTICAL ENCODERS THAT PROVIDE EXCELLENT TACTILE FEEDBACK TO THE USER.

The greatest advantage of optical encoders is their non-contact switching technology which results in an exceptionally high operational life. Although the end-product may vary, typical applications measure speed, distance and/or rotational angle.

## Typical applications include:

- Medical electronics, including patient monitors, ventilators and imagers
- Communication systems, including two-way radios and software defined radios
- Navigation devices for ground vehicles and avionic systems
- Precision test and measuring equipment
- Sound mixing and editing consoles
- Automotive climate control and entertainment systems

## Customizations can include:

- Custom detents (clicks) and tactile feel
- Modified shaft lengths and flats
- Multiple termination and cabling options
- Custom electronics for unique outputs
- Special packaging such as custom mounts

PPR: Pulse per Revolution

# GRAYHILL MECHANICAL ENCODERS COMBINE THE FEEL OF OUR ROTARY SWITCHES WITH A DIGITAL OUTPUT. 

They provide an economical way of obtaining Octal, Binary Coded Decimal, Hexadecimal and Gray code output from a rotary switch. Standard products include offerings with concentric shafts, isolated positions and adjustable stops.

PRODUCT SELECTION CHART

| Series | Features | Life Ratings (Cycles) | Angles of Throw (Degrees) | Output Code | Body Size inches [mm] | Behind Panel Depth inches [mm] |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 71 | Solder Lugs | 25,000 | 36 | Binary | 0.687 [17,45] dia. | 0.761 [19,33] |

## Typical applications include:

- Automotive GPS and radios
- Medical equipment
- Audio/visual recording/mixing equipment
- Avionics
- Transportation equipment
- Fitness equipment
- Test and measurement equipment
- Agricultural equipment
- Construction equipment
- Oscilloscopes
- Pulse/signal generators

## Customization can include:

- Custom detents (clicks) and tactile feel
- Output codes
- Modified shaft lengths and flats
- Multiple termination and cabling options
- Integration into a custom front panel assembly

25

## NAVCODERS ${ }^{\text {T }}$ ARE A UNIQUE INTERFACE DEVICE FOR NAVIGATING THROUGH ON-SCREEN SOFTWARE.

- 4-way or 8-way directional control to navigate through menu options
- Center pushbutton for selecting menu options
- Rotational control for scrolling through many options or adjusting an intensity setting such as volume

JOYSTICK ENCODERS

## HALL-EFFECT TECHNOLOGY PROVIDES CONTACTLESS OPERATION, FACILITATING A LONG OPERATIONAL LIFE.

The Hall-effect sensor magnetically detects the position of another moving part such as the shaft in a joystick or encoder. This relational position can be output from the device in a variety of formats, including I2C, open collector or pushpull output. Hall-effect technology has the advantage of working in low voltage applications and often features a sleep mode to conserve power. Grayhill is introducing this technology across several switch types, including joysticks, paddle/rockers and rotaries.

## JOYSTICKS

These compact joysticks can provide precise cursor control where other pointing devices are impractical, such as on test and measurement equipment or medical electronics. Other applications include CNC positioning, industrial/robotic control and work vehicles/aerial platforms.

Typical applications include:

- Off-Highway vehicles
- Material handling equipment
- Medical electronics, including bed and table positioning
- Remote control Belly Box
- Robotic and industrial automation controllers
- Marine GPS and controls
- Security camera positioning

Customizations can include:

- Various housing and mounting options
- Multiple termination and cabling options
- Custom electronics and output
- Redundancy

Hall-effect sensors detect motion magnetically

| Series | Features | Life Rating (cycles) | Range of Movement | Body Size inches [mm] | Behind Panel Depth inches [mm] | Output |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 67A | Joystick Small Package | 1,000,000 Joystick | Shaft travel $20^{\circ}$ in any direction | $\begin{aligned} & 1.300 \\ & {[33,02] \mathrm{sq}} \end{aligned}$ | 0.727 [18, 47] | $1^{2} \mathrm{C}$ Proportional |

| 67C | Joystick with $360^{\circ}$ Rotation \& Pushbutton | 1,000,000 Rotary, 1,000,000 Pushbutton, 2,000,000 Joystick | 4 sensors, <br> 8 directions | $\begin{aligned} & 1.000 \pm .015 \\ & \text { dia } \end{aligned}$ | . $588 \pm .015$ | Proportional joystick Quadrature Encoder Mechanical pushbutton |

ROTARY

These rotary switches share the same sensor technology: Hall-effect. But their outputs differ substantially. The 68A provides digital quadrature output, similar to other Grayhill encoders. The 68P provides a proportional analog output, similar to a potentiometer. Both benefit from non-contact Hall-effect technology.

## GRAYHILL OFFERS A FULL LINE OF CUSTOMIZABLE KEYPADS. STANDARD CONFIGURATIONS INCLUDE SEALED RUBBER KEYPADS, VANDAL-RESISTANT METALLIC CONSTRUCTION, AND LOW-PROFILE OR FULL TRAVEL ACTUATION KEYPADS.

Typical applications include:

- Transportation equipment
- Healthcare equipment
- Fitness equipment
- Avionics
- ATMs and kiosks
- Security systems
- Industrial controls

Customization can include:

- Legends
- Bezel color
- Multiple termination \& cabling options
- Custom electronics
- Membrane, dome, or carbon pill switching
- Construction: plastic, silicone rubber, metal, etc.

Switching technologies include conductive rubber and metal dome contacts. Outputs include matrix output and single pole/ common bus. All keypads have options for custom legends and many feature backlit keys. Often, a keypad technology is specified for integration into a custom front panel assembly. In these cases, the keypad technology can be deployed in a custom shape to meet the unique requirements of the application.

# GRAYHILL'S PUSHBUTTON SWITCHES HAVE BEEN PROVEN AS A RUGGED SOLUTION FOR COUNTLESS APPLICATIONS. 

Our pushbuttons employ a variety of contact mechanisms, circuitry, mounting and termination options. With such a wide variety available, it's easy to find one that meets your requirements. If you require customization, we can offer custom actuation force and travel distance, or custom termination and cabling options.

Typical applications include:

- Security systems
- Industrial manufacturing equipment
- Casino gaming
- Audio/video equipment
- Avionics
- Fitness equipment
- Test and measurement equipment

Customizations can include:

- Custom caps and legends
- Custom detents (clicks) and tactile feel
- Multiple termination and cabling options
- Custom electronics
- Integration into a Grayhill custom front panel assembly

# GRAYHILL TACT SWITCHES ARE MOMENTARY PUSHBUTTONS DESIGNED FOR COST-EFFECTIVE SWITCHING. 

## Common Features:

- Excellent tactile feedback
- Insert molded terminals on tacts prevents flux buildup during soldering
- Choice of actuators, forces and heights
- Choice of bushings and terminations

Typical applications include:

- Telecommunications
- Industrial products
- Laboratory equipment
- Back-office equipment
- Handsets
- Industrial reset switches

They are mounted to a printed circuit board and typically actuated by a decorative keycap. The ultraminiature and lightweight structure of these tact switches make them suitable for high density mounting. These switches are available in industry standard designs to allow for easy integration.

## Customization can include:

- Custom printing
- Special packaging
- New designs and form-factors

## GRAYHILL OFFERS I/O MODULES IN THE INDUSTRY STANDARD SIZES OF MINI, STANDARD AND G5.

Grayhill also offers its unique OpenLine style I/O module that offers two input/ output points per snap-in module. This not only saves space but also offers quick and tool-free assembly and modification. Grayhill's I/O Racks are available in industry standard size as well as a miniature footprint size to save panel space.

RACKS

| Series | Features | Channels | Agency Approvals |
| :--- | :--- | :--- | :--- |
| 70 | Industry standard footprint | $4,8,16$, or 24 Channel |  |
| 70 M | Miniature footprint | $4,8,16$, or 24 Channel |  |
| $70 G$ | Fuses and LEDs on modules | $4,8,16,24$ or 32 Channel | UL, CSA |
| $70 L$ | Highest Density | $4,8,16$, or 24 Channel | UL, CSA |
